

ICAR-NIANP Scientist Received TEMA 2024 Young Investigator Award

The 18th International Conference on Trace Elements in Man and Animals (TEMA) is being held from 08-12th November, 2024 at M.S. Ramaiah College of Arts, Science and Commerce, Bengaluru in collaboration with Penn State University, USA. This International Conference provided common platform for researchers, academicians and practitioners from around the globe to exchange knowledge, ideas, and impact of trace elements in human, animal, plants and environmental health. This pre-eminent international society (TEMA) was founded in 1967 at University of Oslo with mandate on trace element nutrition, metabolism, biochemistry and molecular biology in humans and animals and this triennial conference is being organized for the first time in India. During this conference, Dr Gopi, M., Scientist, ICAR-NIANP, Bengaluru has received the Prestigious Young Investigator Award for paper on *Maternal supplementation of organic zinc improved offspring's gut health in broiler chickens*. This award further provides him the opportunity to attend future TEMA conference and/or visit to Penn State University, USA with the travel expenses to be borne by TEMA.

Dr Artabandhu Sahoo, Director, ICAR-National Institute of Animal Nutrition and Physiology, Bengaluru receiving the award from organizers during the Conference.

TEMA conference served as a forum to discuss recent progress in studies on molecular biology, metabolism and functional roles of trace elements and its applications in the field of nutrition, human or veterinary medicine, agriculture, biology, ecology and protection of the environment.

This award is the recognition for the research works especially on trace elements being carried out at ICAR-National Institute of Animal Nutrition and Physiology, Bengaluru.
